IN THE CLAIMS:

Amend claim 1 as follows:

1 1. (Thrice amended) An introducer for positioning an expandable endovascular prosthesis in a lumen of a patient, the prosthesis having a proximal portion and a distal portion, the introducer comprising:

a prosthesis positioning mechanism selectively releasable from the prosthesis when the prosthesis is positioned at a desired site in the lumen of a patient;

a first control member separable from the prosthesis positioning mechanism, retaining the prosthesis positioning mechanism with the proximal portion of the prosthesis, and controlling at least a longitudinal position of the proximal portion of the prosthesis; and

a second control member independent of the first control member controlling at least a longitudinal position of the distal portion of the prosthesis.

Amend claim 9 as follows:

9. (Thrice amended) An endovascular arrangement for positioning an expandable prosthesis at a desired location in a lumen of a patient, said arrangement comprising a control section to be maintained external to the patient, and a prosthesis positioning mechanism controllable by the control section for moving and manipulating the prosthesis to a desired location in the lumen, wherein a first member extends from the control section to a proximal region of the positioning mechanism and controls longitudinal and rotational position of the proximal region of the positioning mechanism having means for controlling the proximal end of the prosthesis, wherein a second member extends from the control section to a distal region of the positioning mechanism and independent of the first member controls the longitudinal and rotational
